

CASE STUDY: Lakefront Farms Inc.

Colbourne, Ontario

Unique Building Advantages

Executive Summary

The customer had a 100+ year-old "bank barn" with a stone foundation that needed replacement. With a herd of cattle and a need for extra storage, the customer was looking at multiple solutions including a new barn or constructing a steel building. He was particularly interested in ensuring proper ventilation given the health benefits of added air movement from the herd.

Lakefront Farms Inc is located in Colbourne, Ontario, west of Kingston. Colbourne sits on the water and is known for their prime position along Ontario's Apple Route.

Project Profile

Size:

42' x 96' CC Series with 12' centres

Site Parameters:

40 psf snow load & 40 mph wind speed

Fabric:

White Non-FR bag cover

Mount:

Wood Post

Calhoun's Solution

A 42' x 96' CC Series fabric structure was the best solution and the pricing was "right there" in comparison with other solutions. In addition to the built-in ventilation, the customer loved the laminated posts, bright interior, and high roof.

Additional Information:

One end closed; one end with door opening. Addition of vents.

"The buildings are priced very well and have added benefits no other building solution offers."

- Owner, Lakefront Farms Inc.
