

THE CUSTOMER

The City of Manhattan Public Works Department is a municipal organization based in Manhattan, KS, dedicated to managing and maintaining public infrastructure within the city. They are responsible for overseeing various projects related to streets, utilities, and public spaces.

With a focus on ensuring the efficiency and safety of essential services, the department works diligently to address the needs of the community and enhance the overall quality of life for residents of Manhattan.

PROJECT PROFILE

Size:

37' x 98' CC Series

Site Parameters:

20 psf snow load &
104 mph winds

Fabric:

White PE, Non-FR
Bag Cover design

Mount:

6' steel legs

Additional Features:

Open side and elevated end.

CALHOUN

THE CHALLENGE

The City of Manhattan's maintenance division needed a building that could accommodate the movement of bulk materials in and out using heavy machinery while still providing ample space to maneuver. On top of these operational demands, the project required several custom-tailored design elements to suit the unique conditions of their job site, adding complexity to the overall build.

THE SOLUTION

The structure has an open end, allowing the City of Manhattan's maintenance division to move bulk materials in and out of the building using front-end loaders and dump trucks. To support this workflow, the design included an elevated end to create the necessary clearance and maneuvering space. Calhoun's engineers quickly adapted the design to meet these specific needs, creating custom details that aligned with the site's operational requirements. They produced the updated drawings promptly, ensuring the project stayed on schedule and avoided any delays.

" I WOULD ABSOLUTELY RECOMMEND CALHOUN. I WOULD WORK WITH THEM AGAIN ANYTIME I HAVE A FABRIC STRUCTURE NEED. "
